

ABSTRACT OF THE DISCLOSURE

The present invention relates to a composition for repairing injured skin containing a saccharide and povidone-iodine. The present invention has the following characteristics: suppresses time-dependent increase of consistency, it is easy to use, it is a soft preparation, and has superior applicability to a deep wounded lesion and a granulation tissue. The composition of the present invention contains 50 to 90% by weight of saccharide, 0.5 to 10% by weight of povidone-iodine, 0.1 to 20% by weight of water and 0.01 to 10% by weight of phospholipid.
